CASE STUDY

NAVIGATING GROWTH AND IT RELOCATION FOR A PATIENT-CENTRIC DENTAL SERVICES PROVIDER

A patient-focused dental services provider with a commitment to delivering comprehensive oral healthcare solutions has been working in a small office location without the space to accommodate their IT hardware and technology. With a legacy of excellence spanning several years, this organization has been growing and was in need of a larger space to conduct their day-to-day operations. The company enlisted Judge Consulting to conduct a full IT evaluation and oversee the relocation of their current IT infrastructure to the new office space.

THE CHALLENGE:

Relocating IT Infrastructure While Ensuring Minimal Disruption to Operations

A leading dental services provider, was in the process of relocating its corporate office to a new facility. As part of this transition, they faced the formidable task of relocating their IT infrastructure while ensuring minimal disruption to their operations. Focusing specifically on their IT room, a clean-up effort was needed to eliminate outdated hardware from existing IT racks in the server room. This included a systematic decommissioning process for various equipment types. Despite replacing old hardware, both existing IT racks were to remain in place as they still housed essential network components. This presented the challenge of extracting old equipment while preserving the operational components. The accumulation of old hardware required proper inventorying and eventual electronic recycling.

THE SOLUTION:

Seamless Transition of the IT Infrastructure

To address these challenges, Judge Consulting provided professional IT infrastructure services to facilitate the move. Judge's infrastructure team devised a comprehensive plan to ensure a seamless transition of the IT hardware. This plan was comprised of decommissioning old equipment by meticulously retiring and categorizing each piece of hardware to expedite the relocation process. The team executed the removal of this old equipment while ensuring the structural integrity and operational components of the IT racks remained intact. Careful labeling and documentation were carried out to prevent any confusion during reinstallation. Judge provided the client with a detailed inventory of all removed equipment to help facilitated future electronic recycling pickups.

THE RESULT:

A Streamlined IT Transition During a Corporate Office Relocation

The successful execution of this project led to a streamlined IT room and prepared the client for its corporate office move. The IT room was up-to-date, clean, organized, and free from outdated hardware. This not only ensured a smooth relocation but also improved the overall aesthetics of the IT room. The preservation of the existing IT racks and network components minimized disruption to their operations and saved costs that would have been associated with replacing entire racks. A clear inventory allowed for the effective coordination of electronic recycling in line with the organization's emphasis on environmental sustainability. The detailed planning and execution by Judge Consulting resolved the challenges faced in their IT room transition. The outcome of this project not only met the business needs but also set the stage for a successful operation in the new office space.
